# Act report

For the love of dogs we have investigated the WeRateDogs Twitter page. The page rates dogs and gives them scores. Best scorer is Atticus with a score of 177,6 (1776/10) and the second highest score is 42 (420/10, SnoopDog) and 1776 coincides with the year of the American revolution. Since one is an important year and the other is an internet joke, I see these two as outliers. The other scores and their frequency can be seen in this histogram. The lowest score of 0 is for a tweet where the day of the week is wrong.

The amount of Tweets is almost solely from iPhone (98%). With a few tweets from Twitter Web Client and some from TweetDeck, together less than 2%. In those tweets 10 kind of dogs are represented in a little more than 1/3 of all tweets were dogs can be recognized from the pictures. In 15% of the cases a dog cannot be recognized from the tweets with the computer. The total amount of different dogs in all pictures is 114. 2/3 of the tweets are regarding the other 104 dogs. Maybe some dogs are more popular in tweets, maybe some dog pictures are more send to the Twitter account, or maybe some dogs are just more common in the world/audience of the Twitter account.

Whatever the real cause may be of certain dogs more appearing in the tweets. Intuitively it seems in accordance with popular dog breeds that the Golden Retriever and Labrador Retriever are the most popular.
